You just bought a new computer and you're wondering which browser to use. Since Google Chrome's first release in 2008, it has risen steadily in popularity. In 2011, Google Chrome became the most popular browser, and it has consolidated its majority year after year. Now, as you think about which browser to choose, statistically there is an 82% chance that you will choose Google Chrome, an 8.7% chance that you will go for Mozilla Firefox, 3.4% for both Safari and Internet Explorer and 1.2% for Opera. Google Chrome (64-bit) is completely free to download and use. Popularity is not a measure of how good something is, but it is often an indicator on it. You'll need to look at each browser version by version. Google Chrome (64-bit) has an almighty blow to your browsing experience. In fact, Google Chrome sees itself as more an operating system in an operating system than a simple bit of software. It's a fair enough view to take when you add up all the features it offers. More than just adding your favorite web pages to bookmarks, there's a high level of integration between your internet activity and the Google Chrome browser, creating a more tailored platform you can use. For example, your Gmail account can connect to your browser, which allows all your preferences and activity to be shared across all your devices. You can also run many applications through your browser, as well as the library of extensions and add-ons. You may not need to go further than Google Chrome itself to get what you need! Google Chrome is Google's browsing solution. It has three main competitors: Mozilla Firefox Internet Explorer and Safari. Google Chrome will have to fight hard to retain its popularity as some browsers like Apple's Safari are preinstalled on their devices (including their mobiles and tablets). As a result, the number of Safari users has grown through people who get used to it and simply do not feel the need to change it. If it's not broke then don't fix it! Google Chrome keeps finding breaks and fixing them. Of course, if you've never changed your browser, you can't realize how limited your browser is. Google's highly responsive approach to browser requirements and issues is one of the big reasons they've built such a fan base. Choose your extensions in the Chrome Web Store Google Chrome stays young and keeps up with the internet's ever-changing needs. You can access any web page with it, and almost any technology, including Flash and HTML5, can run next to it. Choose from literally thousands of themes and extensions. From AdBlockers and VPN to Papier and Wikiwand (the latter, if you're wondering, is an extension that spices up the appearance of Wikipedia). If you like to watch videos online (YouTube is the second largest search engine, then chances are you do) or look at multiple photos at once, Google Chrome is probably the best option. Microsoft Edge has made some major improvements in this area as well, but it is only available on iOS and Android in Beta test mode. Firefox Quantum has also made some promising updates, but still does not compare with Google Chrome when playing videos over 1080 pixels or faster than 30 frames per second. Search privacy with Incognito Mode Privacy is a big part of the web conversation, and Google Chrome has given users the ability to reduce their digital footprint with their incognito mode. However, your browsing history and cookies are not stored and no information is sent to websites you visit, however, your IP address is not hidden from the website you visit. By simply using the keyboard shortcut Ctrl Shift N, a new window appears that you can use as usual, but with added peace of mind. It works seamlessly, but it's not the only with this feature: most browsers will offer some kind of kind similar to this and Mozilla Firefox stands out as the most privacy-conscious browser. Data syncing is one of the biggest features of Google Chrome's web browser. By simply connecting your Google Account to Google Chrome, you can share the same browser data and startup tabs across all your devices (provided they operate from Android or iOS). By being logged into Google Cloud, you can also access all their tools (Gmail, Google Drive, Maps etc.) by clicking a button. Google Chrome has a useful homepage with all your most visited sites arranged in square photos that you can click on. Your settings can also be easily managed from the Options tab. How would you summarize Google Chrome (64-bit)? Google Chrome is by far the most popular browser. Popularity is not always an indicator of quality, but it is clear that in this case it is. Mozilla Firefox is also an excellent browser and can compete with Google Chrome and especially Firefox Quantum has some great features, including its video player. It is not a surprise that Mozilla Firefox is the second most popular choice of browser. Internet Explorer and Safari are typically used because they come as standard browsers on Windows and Apple devices, respectively. While they both will get the job done, neither have the passion nor energy of Google Chrome (or Mozilla Firefox). Updates are less common and less groundbreaking, except of course. Google Chrome stays one step ahead of the game, and thus one step ahead of the competition. What is the final verdict on Google Chrome (64-bit)? As to choose a winner within all the different software categories to go, this must be one of the easiest. Google Chrome wins hands down. There will of course be people who have their own compelling reasons for using other browsers, but these will by and large be personal to them. Perhaps if you worry about your privacy, Mozilla Firefox would make a better choice, or if you have a penchant for virtual reality, Mozilla Firefox Reality would be a better bet. The overall picture is very clear in Google Chrome's favor. They put the user first year after year and year after year they come out as technically the best and critically most popular. The Chrome 64-bit for Windows 64-bit version of the Google Chrome browser is available since August 2014. You can read information about the latest news related to 64-bit Chrome on this page, and you can also download them directly. Welcome to the 64-bit Chrome community!
